euromicron Deutschland concludes strategic partnership with Advancis

Vendor-independent security and building management as a control center for Smart Building Solutions

Frankfurt/Main / Neu-Isenburg, September 13, 2016 – euromicron Deutschland GmbH, one of the leading German system houses in the future market of the Internet of Things, has concluded a strategic partnership with Advancis. With its WinGuard system, Advancis Software & Services GmbH is one of the international market and technology leaders in the field of vendor-independent security and building management.

Workflows in day-to-day operation of a control center are growing in complexity. Whether at a hospital, prison, public authorities or in production operations – it is more and more often the case that the responsible control center staff must operate and manage a large number of scantily integrated individual systems. To counter the great cost and effort that involves, euromicron Deutschland offers customized, integrated all-round solutions that are based on a common transmission infrastructure.

“As part of our Smart Building Solutions, we advise our customers to focus in future on networked solutions and combine multiple trade disciplines. That increases the functionality, enhances efficiency and slashes operating costs lastingly,” states Andreas Lendner, Managing Director of euromicron Deutschland GmbH. Even more significant in many cases are the synergy effects from integrating the wide range of different technical systems. Because they are what transform a building into what is often termed nowadays a Smart Building. “By using the vendor-independent Advancis system WinGuard, we offer our customers a high degree of variability and above all personalized and integrated all-round solutions,” adds Lendner. The security, building, communication and IT infrastructure are integrated in a single control platform in customized projects and complemented by smart services if and when required. As a result, ensuring building security is turned into a simple, efficient and controllable operation. The portfolio of services from euromicron Deutschland for Smart Building Solutions ranges from nationwide design, planning, installation and implementation to maintenance and servicing of the security and building management systems.

About euromicron

euromicron AG (www.euromicron.de), a company that unites medium-sized high-tech companies from the fields of Digital Buildings, Critical Infrastructures and Smart Industry. As a German specialist for the Internet of Things, euromicron enables its customers to network business and production processes and successfully move to a digital future.
