

Press Release

euromicron Group at the InnoTrans: Focus on Solutions for Critical and Intelligent Infrastructures

Frankfurt am Main, August 11, 2016. From September 20 to 23, 2016, the euromicron group will present their holistic approaches to smart traffic infrastructures during the international trade fair for traffic technology, InnoTrans, in Berlin, Germany.

With increasing digitalisation and the options provided by the Internet of Things (IoT), smart communication is due to shape future mobility and the relevant traffic infrastructures of tomorrow to a decisive degree. The demands made on the intelligent and functioning networking for the transmission of voice, video, and application-related data within the critical infrastructures of regional and national transport and traffic companies will rise significantly.

To ensure the safety of passengers and employees, a highly available, structured operational network is required, which is configured under consideration of the relevant safety aspects and permits the communication of all devices and components with each other. This includes, for instance, video-surveillance, emergency call systems, signals, and the merging of video and voice data in a control center. This is primarily implemented by means of secure, IP-based applications.

In **Hall 4.1 at Booth 313**, four subsidiaries of the technology group euromicron will present their innovative solutions and concepts for trains and urban public transport.

- **Mission-Critical Solutions**

As a comprehensive systems integrator and network specialist for operational and security-relevant communication, telent GmbH will present their portfolio on the sector of secure networks, control center technology (Mica), IoT solutions, object radio systems, and smart services.

- **Digitalized Railway Stations**

euromicron Deutschland GmbH will present intelligent and holistic system concepts on the sectors communications, security, IP video-surveillance, passenger information systems, and fire protection concepts.

- **Robust Connectivity**

MICROSENS GmbH & Co. KG focuses on robust, reliable, intelligent and secure networking systems for IT infrastructures in the area of railway and transportation.

- **Networked Information Systems**

The trade fair portfolio provided by euromicron is rounded off by the innovative products of ProCom Professional Communication & Services GmbH with diverse public address, intercommunication and emergency call systems with calling points and loudspeakers as well as further end devices.

For further information on the trade fair appearance and the focal points of the exhibits of the companies involved, please go to: <https://www.euromicron.de/innotrans-security-2016>. This site gives interested persons the option to make an appointment for an individual consulting event on-site and to register for a trade fair ticket.

About euromicron AG:

euromicron AG (www.euromicron.de), a company that unites medium-sized high-tech companies from the fields of Digital Buildings, Critical Infrastructures and Smart Industry. As a German specialist for the Internet of Things, euromicron enables its customers to network business and production processes and successfully move to a digital future. From design and implementation, operation, to related services – euromicron implements customized solutions and creates the IT, network and security infrastructures that they require. As a result, euromicron enables its customers to gradually migrate existing infrastructures to the digital age. euromicron's expertise helps the company's customers increase their agility and efficiency, as well as develop new business models that lay the foundation for commercial success down the road. The technology group is headquartered in Frankfurt/Main, has been listed on the stock exchange since 1998 and employs around 1,800 people at 30 locations. The euromicron Group comprises a total of 14 subsidiaries, including the brand names Elabo, LWL-Sachsenkabel, MICROSENS and telent. euromicron AG generated total sales of €345 million in fiscal year 2015.

About euromicron Deutschland:

euromicron Deutschland GmbH (www.euromicron-deutschland.de) is a subsidiary of euromicron AG. With the company headquarters in Neu-Isenburg and a network of subsidiaries throughout Germany, euromicron Deutschland is one of the leading German systems integrators on the future market of the Internet of Things. The business activities focus on all-in solutions beyond industries in the area of intelligent building technologies (smart building solutions) from the sector networks, IT security, telecommunications, and security systems. The customer base includes renowned network operators and energy suppliers, private companies from the sectors of transport, logistics and traffic, companies of the public sector and civil service, institutions and agencies on the health sector, banks and insurance companies.

About MICROSENS:

Since 1993, MICROSENS GmbH & Co. KG (www.microsens.de) has been standing for Fiber Optic Solutions. As one of the pioneers of fiber optic transmission systems, the internationally active company covers all performance sectors of fiber optic technology. Starting with solutions for future-proof office networking and high-availability in rough environments, the product portfolio ranges from large-scale site networking and interconnection of computing centers up to high-performance Wide Area Networks (WANs). In all these fields of application, MICROSENS provides and ensures efficient, fast, and secure data transfer. As an internationally successful manufacturer, MICROSENS distributes its products on a worldwide scale. In addition to the company headquarters in Hamm in Westphalia (Germany), MICROSENS also has sales subsidiaries in France and Poland to optimally fulfil the diverse requirements of its customers on-site.

About ProCom:

ProCom Professional Communication & Service GmbH (www.procomgmbh.de) is an innovative company of the communications industry. The company develops, manufactures, projects, and distributes communications systems with widely distributed applications, including the corresponding software and services. The company provides a network of representatives and partners over almost the complete globe, who can respond quickly and efficiently to the requirements of their customers. This results in an export share of approximately 30-40%.

About telnet:

telnet GmbH – a company of the euromicron group – (www.telnet.de) is a vendor-independent provider of solutions relating to networks and systems for critical infrastructures as well as operational and security-relevant communications. The company supports its customers in the design, planning, installation, integration, operation, and maintenance of advanced, comprehensive services. Focal points are IP technology for operational networks, PMR solutions, as well as network and asset management. telnet can draw on highly-qualified employees on the sites Backnang, Teltow, and Radeberg, as well as in ten further subsidiaries throughout Germany. The customer base consists of institutions and companies, particularly from the sectors railway transport, traffic infrastructure, energy supply, IT, and telecommunications.
